*I'm happy to follow up this session with emails, skypes, etc ... just contact me. You can also sign up for free consulting at the main conference desk for this afternoon and Sunday morning.*

---

### The first program: [Program A](#)

Teachers in groups of three to five choose a topic relevant to them for a bit of research, and then observe others, observe themselves (via video) and get observed - all to support collective discussion.

---

### The second program: [Program B](#)

An observer records teacher and student talk using an online program that gives the teacher an immediate pie-chart summary of the classroom talk.

**Observation tool** (I will share the site during the session - happy to look into how to share it further with you.)

---

**The third program: Takk mobile app** (Nothing to show here, just the concept to introduce ... because we've put this project on hold.)

---

**The fourth program: Prolearning** (No link here today - but I am happy to share what we have with you if you contact me - the intent is to make this web-based resource open source and available to all who want to play with it, adapt it, change it ... )

---

### The next program?

---

**The format of this session:** *You'll have a chance to share pd programs from your experience and hear what others are doing in their schools, using the programs above to kick-start the discussion. We'll finish by working on a pd program in your school or organization - either an improvement to the existing program or a new program all together.*
